

# LTRAX

## LTACH OUTCOMES SYSTEM

Capture data and manage hospital outcomes using the system that brings better patient care to long-term acute care hospitals. LTRAX turns your administrative and clinical data into patient-centered intelligence. Manage more effectively, improve patient outcomes, and see the results.

LTRAX Supports  
CMS Quality  
Reporting

COLLECT THE LTCH  
CARE DATA SET

### LTCH CARE Quality Reporting

- Collect the complete LTCH Care Data Set for CMS Quality Reporting
- Prepare electronic submissions
- Avoid payment cuts
- Ensure accurate reporting
  - ◆ Warnings for timeliness
  - ◆ Completion checks
  - ◆ CMS transmission reports

### Outcomes Reports

- Measure performance on outcomes used for Medicare public reporting
- Compare outcomes among facilities within your organization
- View comprehensive outcomes reports for any facility
- See differences in outcomes broken down by diagnostic categories and diagnosis-related groups
- Compare your facility outcomes to national and regional data sets
- Use weighted statistics for apples-to-apples comparisons
- Produce printable reports or download data to spreadsheets

### Patient Records

- Access real-time snapshot of LTACH Patient Criteria percentage
- Capture diagnoses and diagnosis-related group for every patient

### Wound Assessments

- Score wound severity and track healing using Bates-Jensen Wound Assessment and PUSH Tools
- Assess patient wounds individually, and track progress independently
- Featured Outcomes
  - ◆ Pressure ulcer rates, including breakdown by patient risk for ulcers
  - ◆ Healing rate
  - ◆ Wound improvement by score and size

### Ventilator Assessments

- Track progress in respiratory function from admission through discharge
- Monitor days on mechanical ventilation
- Track weaning attempts and outcomes
- Featured Outcomes
  - ◆ Weaning success
  - ◆ Reasons for weaning failure
  - ◆ Vent status at discharge

### Dashboards

- See selected indicators for your hospital's current patients at-a-glance:
  - ◆ Translators – Patients who need translators and their required languages
  - ◆ Delirium – Patients who showed indications of delirium at admission
  - ◆ Pressure Ulcer Risk – Patients at higher risk of developing pressure ulcers
  - ◆ Interruptions – Recently discharged Medicare patients who would continue an interrupted stay if readmitted

### Skin Assessments

- Assess every patient using the Braden Scale for Predicting Pressure Sore Risk®
- Reassess as needed

### Patient Satisfaction Surveys

- Gather patient feedback with surveys that use standardized HCAHPS questions

### Pre-Admission Screening

- Collect pre-admission data in one place
- Begin tracking LTACH Patient Criteria before admission
- Document acute hospital-acquired conditions and infections
- Enter data online or offline, on a desktop, laptop, or iPad
- Rescreen/update status and referral sources with ease
- Increase liaison productivity

### Admissions Office Notification System

- Notify LTRAX users in your hospital's admission office by email when a pre-admission screening is ready for review

### Referrals Tracking System

- Track referral volume denials and conversions
- View conversion statistics by referring facility and physician
- Identify barriers to admission and trends in reasons for denial
- See differences in referrals trends broken down by diagnostic categories

## JOIN LTRAX...

- Get free training and support
- Enter data into easy-to-use screens
- Comply with HIPAA standards
- Login from anywhere on any device with secure Internet access
